

Environmental Profile

Re Art Gloss & Matt 100% Recycled

Supplier Oji Paper, Japan
Website www.ojipaper.co.jp/english

Site Kasugai / Fuji Mill, Japan
Date March 2008

Fibre Source

The ReArt Gloss & Matt range contains 100% recycled fibre, with a minimum of 90% post consumer waste. The recycled fibre is derived from the following sources:

40% Recycled Magazine
30% Recycled Newsprint
20% Hi-Grade Paper
10% Other recycled papers

Bleaching

Re Art Gloss and Matt text weights (105 to 157gsm) are bleached using Process Chlorine Free technology (PCF). This process achieves a high white shade without the use of chlorine or any of its elements. Pulp used to produce Re Art Gloss board weights (190 to 310gsm) are ECF.

Energy Source

51% of electricity used by Oji Paper is generated from bio-mass fuel, recycled from the paper making process. Black liquor, a bi-product of the pulping process is burnt to generate steam power. Oji Paper aim to increase the use of bio-mass and renewable energy sources. in coming years.

Mill Profile

The Oji Paper Group are world leaders in environmentally friendly paper production. They have interests in forestry, pulp and paper production and distribution. They have achieved high environmental standards across all of these sub-sectors recognised through their achievement of EcoMark and ISO14001 accreditation.

Boasting a total of 33 mills across Japan, the ReArt and RePrint range are the flagship products for recycled content and environmental responsibility. However, even more amazing is their commitment across the entire mill group - they use more than 60% recovered fibre across all paper production. In order to achieve this extraordinary level Oji Paper have been a major advocate in developing, promoting and expanding recycling programs in Japan and around the world.
